

GTM ENGINEERING · INTERVIEW ASSIGNMENT

AI-Powered GTM Activation Engine

Detects users stuck in the funnel and triggers automated GTM actions.

Runs daily to send the next best action across Salesforce, HubSpot, Slack, and email.

Where the Funnel Leaks

1.57%

Total conversion rate

Lead → Signup

5,650
lost

19.3% conversion

Product Run →
Team Invite

22.9
%

critical drop

Fix the Moments Where Intent Exists but Action Stalls

Leakage Point 1 - Lead → Signup

Problem: High-intent leads are not converting into signups. 5,650 users are lost at the top of the funnel.

Fix: Use personalized AI follow-up sequences. Add sales alerts for high-value accounts before intent decays.

Leakage Point 2 - Product Run → Team Invite

Problem: Users reach product value but do not expand adoption. Only 22.9% invite teammates after a successful build.

Fix: Trigger an AI-generated team adoption email. Follow with a HubSpot sequence or Salesforce task when build activity stalls.

PROPOSED SOLUTION

Daily AI-Powered GTM Activation

Before

Manual dashboard checks

Delayed sales follow-up

Generic campaigns

No clear owner or escalation path

After

Daily Snowflake scan

AI detects root cause

Personalized email generated automatically

Salesforce task + HubSpot sequence created

How the PoC Works

Daily workflow: Data sources → Snowflake → Make → GPT → GTM Actions

AI DECISION EXAMPLE

From Product Signal to GTM Action

Signal Detected

User completed a successful build
No teammate invite

AI-Generated Actions

- Send team adoption email
- Add to HubSpot sequence
- Create Salesforce task
- Send Slack alert

Why This Solves Incredibuild's Issue

How It Solves the Problem

- Captures high-intent leads before interest fades
- Flags users stuck after setup or first build
- Turns product signals into instant GTM actions
- Drives team adoption from individual usage
- Reduces manual follow-up with automation

What's Included GitHub MVP Deliverables

- README.md and architecture docs
- Make scenario export
- AI prompt template in markdown
- Sample Snowflake response JSON

Requirements

- Snowflake funnel data and PostHog events
- HubSpot contacts and Salesforce Lead/Owner IDs
- ZoomInfo enrichment and OpenAI/GPT API
- Make schedule and scenario configuration
